Lab 1 Exploring Linux distributions

Question 1

1. What is the OS Type: **Linux**
2. Which major distro is it based on? **Debian**
3. Which processor architecture does it support? **armhf, ppc64el, riscv, s390x, x86_64**
4. Is the distribution active or is it discontinued? **Active**
5. What is the distro's home page? **https://www.ubuntu.com/**

Question 2

1. What is the name of the distribution and the OS Type: **Name is CloudReady. OS Type is Linux.**
2. Which major distro is it based on? **Gentoo**
3. Which processor architecture does it support? **x86_64**
4. Is the distribution active or is it discontinued? **Active**
5. What is the distro's home page? **https://www.neverware.com/**

Question 3

1. What is the name of the distribution? **EndeavourOS**
2. What is the country of Origin? **Netherlands**
3. What major distribution is it based on? **Arch**
4. What is the distribution category? **Desktop, Live Medium**
5. Which processor architecture, aside from the one in the original query, does the OS support? **aarch64**

Question 4

A Linux distribution used for Data Rescue/Data recovery

Distro name	Website	Desktop Environment
Kali Linux	http://www.kali.org/	Enlightenment, GNOME, KDE Plasma, LXDE, MATE, Xfce

A Linux distribution used for Education that supports the ix86 processor architecture.

Distro name	Website	Desktop Environment
Nix Os	http://nixos.org/	Awesome, Enlightenment, Fluxbox, GNOME, i3, IceWM, KDE Plasma, Ratpoison, Xfce

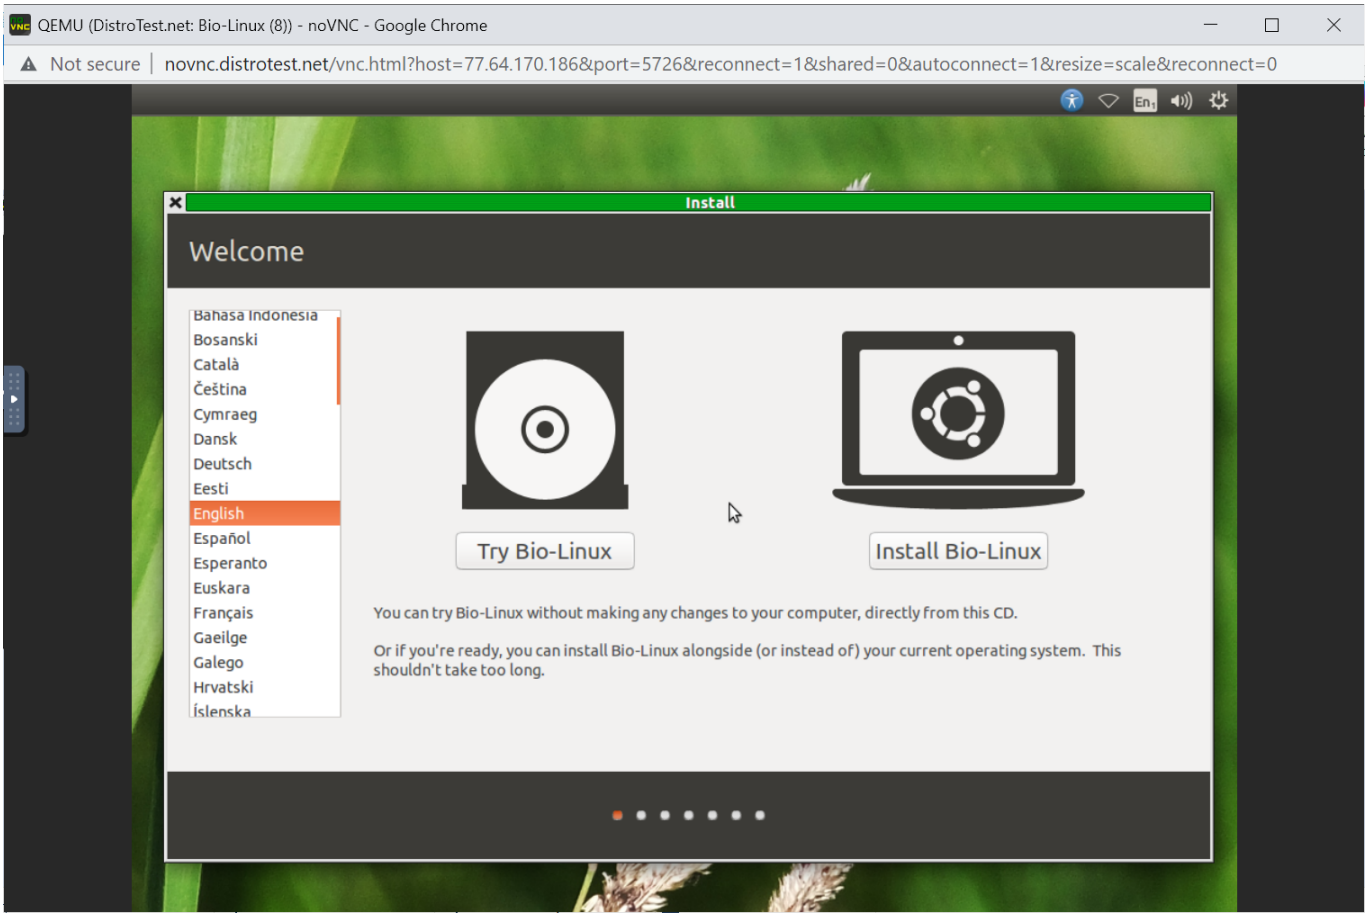
A Linux distribution that supports the OEM installation method

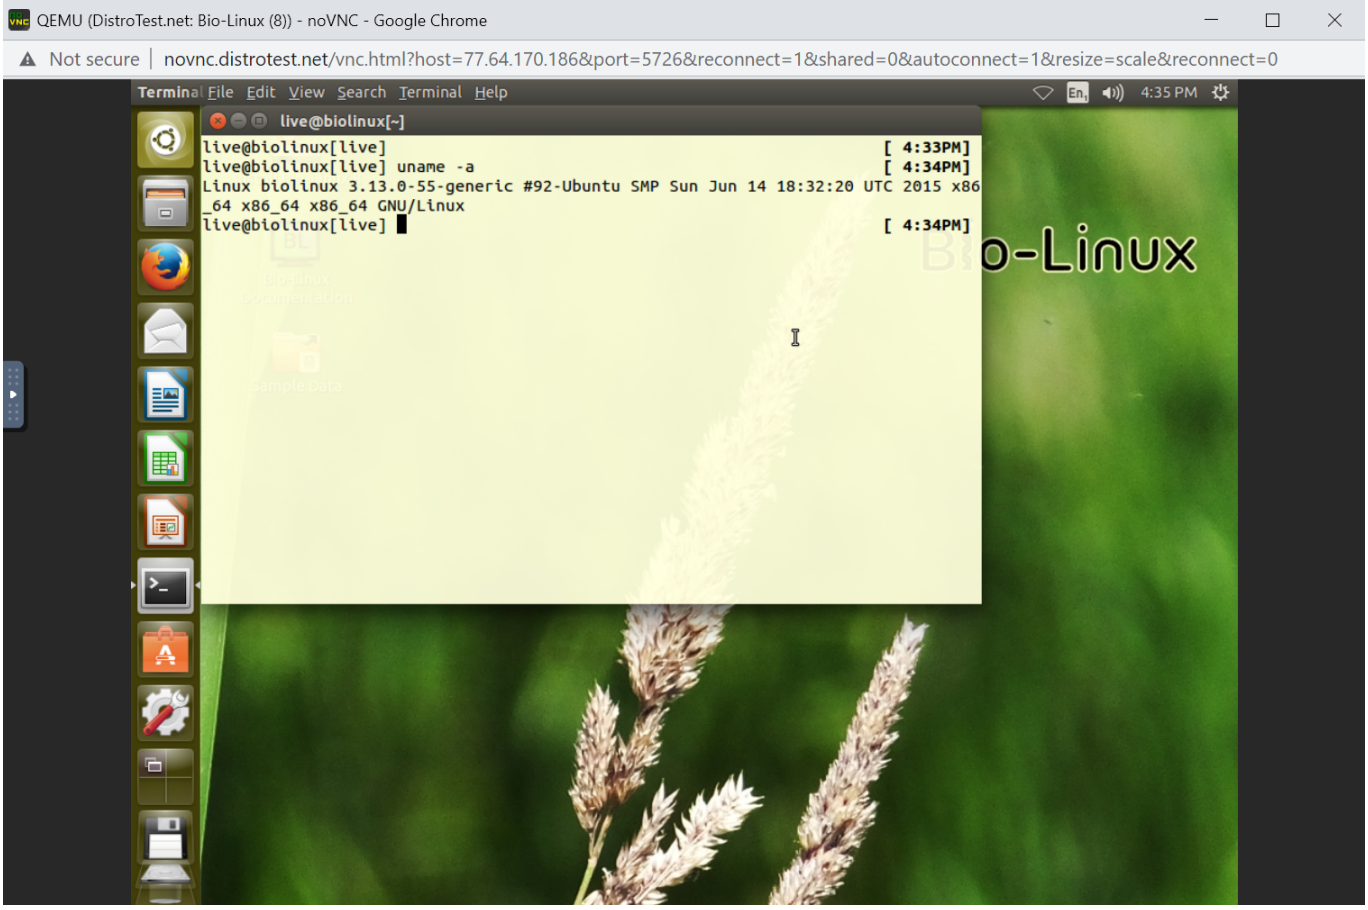
Distro name	Website	Desktop Environment
Linux Mint	https://linuxmint.com/	Cinnamon, MATE, Xfce

Question 5

PredatorOS is "*a security-centric free open-source Linux project for penetration testing and ethical hacking and also you can use it as: privacy, hardened, secure, anonymized linux distro*" . A operating system that can be used for the various stated before is pretty interesting and fascinating. Especially in a time where companies are trying more and more to collect as much information about you, privacy on the internet is more important than ever.

Question 6





QEMU (DistroTest.net: Bio-Linux (8)) - noVNC - Google Chrome
Not secure | novnc.distrotest.net/vnc.html?host=77.64.170.186&port=5726&reconnect=1&shared=0&autoconnect=1&resize=scale&reconnect=0
