Week Report 3

Summary of Presentations

Exploring Desktop Environments

- Different Desktop Environments
    - GNOME
    - MATE
    - KDE
    - XFCE
    - LXDE
- GUI: A graphical user interface is a set of programs that allows a user to interact with the computer system via icons, windows, and various other visual elements.
- DE: A desktop environment is an implementation of the desktop metaphor made of a bundle of programs running on top of a computer operating system, which shares a common GUI, sometimes described as a graphical shell.
- Common elements of desktop environments
    - Icons
    - Widgets
    - Toolbars
    - Windows
    - Wallpapers

The bash Shell

- What is a shell?
    - A program that provides interactive access to the Linux system. The shell is a command line interpreter that invokes kernel level commands.
        - Runs as a regular program and is normally started whenever a user logs in into a terminal.
- Different shells besides the bash shell
    - Tcsh Shell
    - Csh Shell
    - Ksh Shell
    - Zsh Shell
    - Fish Shell

Bash Shortcuts

- **Ctrl + A** - go to the start of the command line.
- **Ctrl + E** - go to the end of the command line.
- **Ctrl + K** - delete from cursor to the end of the command line.
- **Ctrl + U** - delete from cursor to the start of the command line

- **Ctrl + F** - move forward one character
- **Ctrl + B** - move backward one character
- **Ctrl + L** - clear the screen
- **Ctrl + C** - terminate the command
- **Ctrl + Z** - suspend/stop the command

List of basic commands

- date - displays the current time and date
- cal - displays a calendar of the current month
- df - displays the current amount of free space on our disk drives
- free - displays the amount of free memory
- uname - displays information about your system
- clear - clears the screen

Managing Software

Command for updating ubuntu

> 'sudo apt update; sudo apt upgrade -y'

Command for installing software

> 'sudo apt install **"package name"**'

- examples:
  - 'sudo apt install firefox'
  - 'sudo apt install firefox vlc'

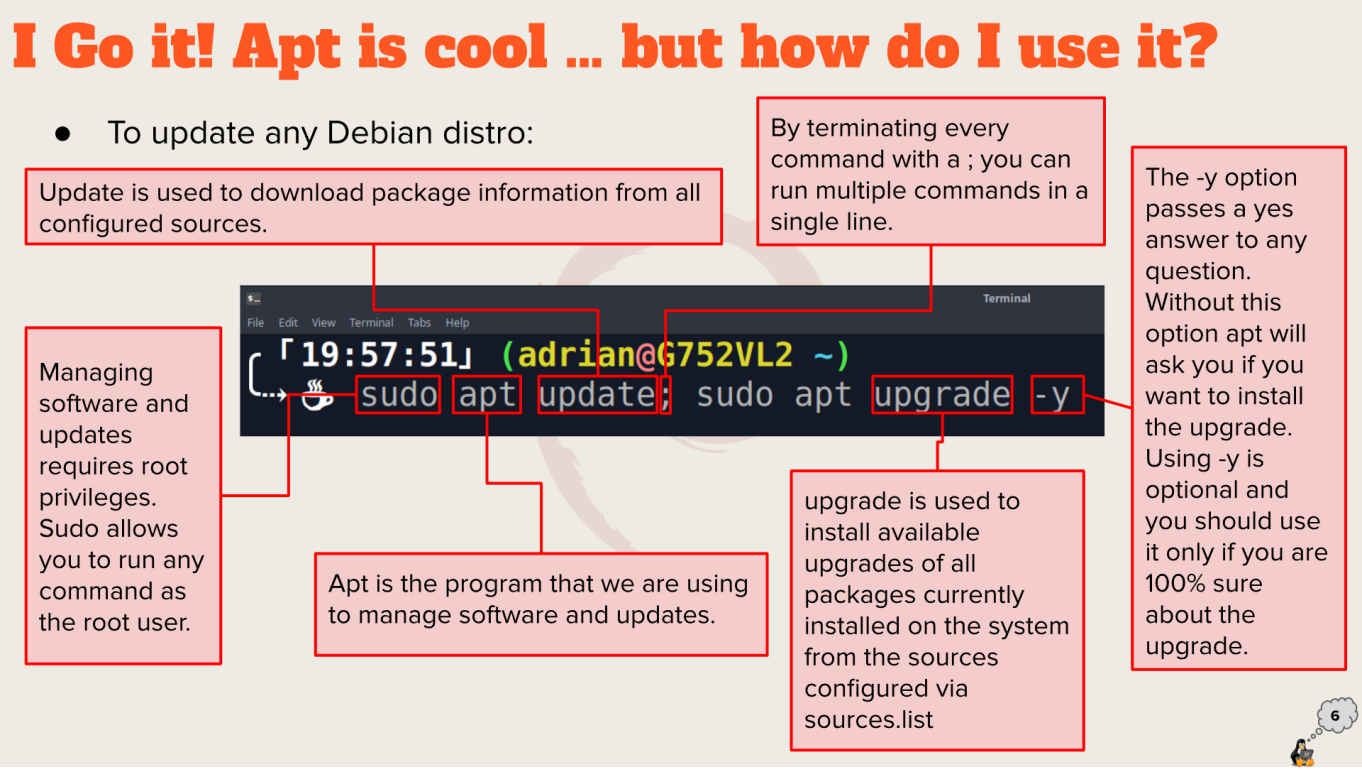
Command for removing software

> 'sudo apt remove **"package name"**'

- examples:
  - 'sudo apt remove firefox'
  - 'sudo apt remove firefox vlc'

Command for searching for software

> 'apt search **"insert keyword"**'

- examples:
  - 'apt search "web browser"'
- **Package**: Archives that contain binaries of software, configuration files, and information about dependencies.
  - In Windows, these are commonly **.exe** files.
- **Library**: Reusable code that can be used by more than one function or program.


- **Repository**: A large collection of software available for download.
    - Main - Canonical-supported free and open-source software.
    - Universe - Community-maintained free and open-source software.
    - Restricted - Proprietary drivers for devices.
    - Multiverse - Software restricted by copyright or legal issues.
